

OPERA NIMBUS - SOFTWARE RELEASE NOTES

Software Upgrade 2024b

2024-11-07 roll out to operational NIMBUS process chain

Baltrad – Container for NIMBUS process chain („BALTRAD Core“)

No changes.

Postprocessing

1. Bugfix to prevent the distribution occasionally corrupt or uncomplete composite rain rate files
Source: <https://github.com/opera-radar/opera-nimbus-test-env/issues/146>
Composite files are checked for completeness and readability before being send to users.
2. Bugfix to provide readability of 15-min QC volume files for all HDF5-readers
Source: <https://github.com/opera-radar/opera-nimbus-test-env/issues/165>
The postprocessing routine to combine all 5-min QC volume files to one 15-min volume file has been adopted to avoid reading errors with new HDF5-libraries.
3. Bugfix to prevent 15-min QC volume files with double entries
Source: Mail to OPERA SUPPORT
A postprocessing routine introduced to generate 15-minute QC volume files from 10-minute update files was inadvertently appending redundant data to existing 15-minute QC files during a second run. The routine now checks for the existence of a file before appending, ensuring that new data is only added if the file does not already exist.

Data update 2024b

2024-11-07 roll out to operational NIMBUS process chain

Following the procedure to introduce new or change existing data the following radars have been configured according to their requests on <https://github.com/opera-radar/opera-production-change-management>.

EFKL	44-54			Finland
ENMI	43	norsg	Rassegalvarri	Norway
